

JOHNNY NERO ACTION HERO TECHNICAL BULLETIN

Please be advised that the Action Hero Main logic PCB is sensitive to the 5 Volt in-put it receives from the power supply. It is recommended that the 5 Volt line is properly adjusted to **5.0 V + or - .1 V**.

A 5V input that is too high or low may prohibit the game from booting-up or could cause the game to re-set. Please properly adjust the 5V before installing the main logic board.

Thank you for your attention to this matter.

Thank you for supporting I.C.E. products.

Sincerely,

The I.C.E. Service Department
