

Service Bulletin #31

To: Service Manager
From: Data East Pinball Service Department
Date: December 6, 1991
Subject: Star Trek Program Update

Enclosed is the latest version of the Star Trek program. The game code is version 1.17, the display code is version 1.09. The Roms should used as a pair.

This program fixes bugs in the tech alert area and an intermittent condition which prevents the ball from being launched. The program now periodically resets the display so that if, for any reason the display board is "out of sync" with the CPU, it will be updated immediately. It also provides an adjustment (RESTART GAME) to prevent players from accidentally restarting the game prior to the last ball in play.

We recommend all Star Trek Games be updated for better performance.
